WHAT'S IN A GLASS OF TAP WATER?

Arsenic
Radioactive
Contaminants
Pesticides
Nitrates
Hormones
Fluorine
compounds

Calcium
Hexavalent
Chromium
Lead
Pharmaceutical
Drugs
Aluminium
Trihalomethanes
(THMs)

There are newly emerging contaminants in the water supply today that are deemed carcinogenic or just plain unhealthy... things like PFOA/PFAS, GenX, 1,4 Dioxane and others. We can no longer take our tapwater for granted. These contaminants can show up in your brew as well. We can do nothing or show that we care and take action.

**5-Years Ago,
75% of Water
Treatment for
